You'll walk 10km across Sydney's north from Thornleigh to Hornsby. This walk is the 3rd stage within the series of Great North walks. When: Sunday 28 April and Wednesday 1 May 2019, 8.30am to 3pm. You'll start the stage 3 walk by leaving the watershed of Lane Cove River and Sydney Harbour. You'll head towards Hawkesbury and Berowra Valley National Park where you'll travel by a wide variety of plant habitats. You'll also journey by small creeks and streams throughout the day. SRS. Publications. Current: Estimating watershed evapotranspiration across the United States using multiple methods. This article is part of a larger document. View the larger document here. Evapotranspiration (ET) is the largest watershed water balance component only next to precipitation in the United States.
